

# IGNEOUS ROCK

1) Igneous rock is created from fiery, molten magma deep within the earth. Or perhaps by dragon-fire.

2) When magma spews forth from the earth it is called lava.

Earth's Surface

2

3) As lava quickly cools, it forms igneous rock ~ extrusive igneous rock, such as basalt & pumice.

3

4) When magma comes near to the earth's surface enough to cool, it forms intrusive igneous rock, like granite.
